

Adult – Volume Assessment

Course Description: This module is a comprehensive guide to circulatory volume assessment. After taking it, students will be able to explain and discuss the importance of understanding these volume assessments, along with the associated signs, symptoms, and interventions.

Course Objectives:

- Explain the purpose of circulatory volume assessment
- Differentiate between volume depletion and volume overload
- Describe the potential effects of diuretics on volume-depleted patients
- Discuss the signs and symptoms of volume depletion and volume overload in patients
- Describe volume-status nursing interventions and assessment considerations
