

Chest Pain Assessment - QL

Course Description: Chest Pain Assessment discusses the role of coronary arteries in producing chest pain, and describes both typical and atypical symptoms. It offers tips for conducting history-taking interviews and offers special considerations for assessing chest pain.

Course Objectives:

- Describe the relationship between the coronary arteries and cardiac chest pain
- Discuss the factors involved in taking chest-pain histories and relate them to patient presentations
- Describe typical and atypical symptoms of cardiac chest pain
- Explain the importance of putting the pieces of the symptom puzzle together
