

Neonatal Gastrointestinal Assessment Fast Track

Course Description: This module covers the anatomy and physiology of the gastrointestinal system and digestion, normal and abnormal findings of the GI system in daily assessments, and a number of diagnoses related to the GI system. A case scenario tests the student's understanding of the material.

Course Objectives:

- Describe the basic anatomy of the gastrointestinal system
- Explain the physiology of digestion and the roles of the gastrointestinal organs
- Differentiate between normal and abnormal findings during gastrointestinal assessments
- Differentiate between common pathologies and congenital anomalies of the gastrointestinal system
